Master Italy completes the range of its anti-burglary accessories with kits for side by side sash

Master group has always been at the service of door and window frame manufacturers around the world to support them in carrying out **tests and product certifications** through its **MasterLAB** research centre with testing laboratory. During the lockdown, the centre has significantly increased the volume of services provided as an integral part of company's offer, after observing a strong market interest in **burglary-related issues**, which have been noticed in some specific areas of the national territory but also in many Central European countries, where the prevalence of private houses at street level requires the use of anti-burglary security systems.

Master Italy has been offering solutions such as kits and anti-burglary locking points for several years, especially for the main window sash, for example with Art. 3400A.53 / Art. 3421A.53 that allow door and window frame manufacturers to achieve **anti-burglary certification RC2** pursuant to EN1627/28/29/30 standards. Such solutions are available for CE/R40 systems and are compatible with the entire WEEN Program for tilt&turn systems made by Master.

The novelty of 2020 in the field of security systems made by Master consists in the manufacture and marketing of **anti-burglary systems dedicated to the secondary sash**, for **window sill**, with art. 4532.1 / 4533.1 and **balcony door** with art. 4532 / 4533. These products are also available for CE/R40 systems and allow obtaining RC2 anti-burglary certification of the frame following the technical guidelines given in the **anti-burglary manual** created by Master.

The product range is completed by the **override art. 4228** is designed for door profiles, ideal for the inactive leaf on tilt&turn systems, and consists of a **pin in AISI 303 stainless steel** that perfectly threads into the special slot of the door frame during leaf closing movement. This override guarantees the system the important **anti-lift property** and contributes to obtaining of the **RC2 certification for 2 leaf door frames**.

With the new security kits for secondary door leaf and override, **MasterItaly** can offer a wide range of solutions in this area and thanks to its **MasterLAB** test laboratory, makes available to door and window frame manufacturers the **anti-burglary certification service** for door and window frames.
